

Complete Visibility

Dispatcher has complete visibility of the drivers' status within the HOS E-Log shift and cycle as per the DOT requirements. The display is color coded to alert the dispatcher of upcoming violations.

Up to the second data protection

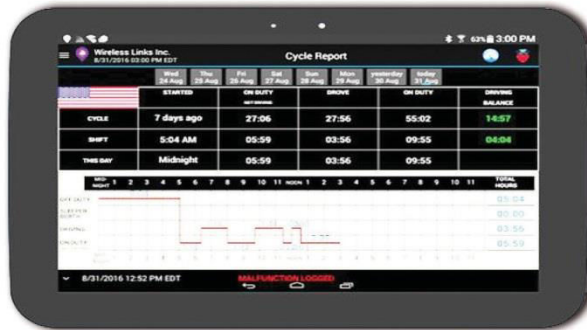

The HOS data on the Android ELD device is continuously and automatically synchronized with the data stored on the server. If the driver loses or breaks the device, when logging in from a new ELD device with the correct credentials, the server will automatically download to the new device current and historical data.

DriverLog

FMCSA Approved & Compliant Electronic Driver Log

E-Log integrated with DVIR. Made Simple & Affordable

DriverLog - The most complete HOS solution compliant with the ELD mandate, fully integrated with DVIR.

Driver Cycle View of the driver HOS status within current cycle

DriverLog is the industry's simplest to operate, most flexible to implement and most affordable E-Log solution fully compliant with FMCSA ruling and Canadian DOT ruling for HOS, fully integrated with DVIR. DriverLog is made up of two components: The mobile application that can be installed on any Android device and the web based DriverLog platform that is easy to adopt and integrate into your current operation.

DVIR provides complete visibility of daily and historical monitoring of the inspection finding for every truck

The DriverLog Platform is providing the dispatcher with complete visibility of the status of every driver in the E-Log HOS shift and cycle including replay of daily history and comprehensive reports including the inspection finding for every truck.

Electronic DriverLog Configuration

Why buy from SensLynx?

- Economically priced
- Easy to install in 15-20 minutes
- Easy to use/easy to deploy
- No software purchase necessary
- Web-based
- Highly secure data center
- Homeland Security compliant
- Local Customer Support/Training
- Cloud Based hosted

BlueLink LED with Android tablet or cellphone.

Driverlog utilizes a BlueLink Bluetooth Transmitter that plugs directly into the truck's ECM J1939, J1708 and OBDII engine diagnostic connector.

BlueLink will send the ECM data via Bluetooth BLE to any Android device. The DriverLog app installed on the ELD Android Device receives the data and syncs with the server via the ELD device's cellular data plan.

Note:

If you already have a GPS fleet management system installed, BlueLink can be plugged into the vehicle ECM (engine control module) without interfering with your current fleet management device and solution.
